Age Of Mythology Titans 103 Crack No Cd

I want to remove the last "/" from the string. I tried with str.replace("html", ""), but in this way I remove only the last "/" and the html in the end of the string. Any ideas? A: Try splitting the string using - temp = str.split("/"); if(temp[temp.length-1].includes('.')) { //this is the case you want to remove } Explanation: In case if the string is like, "" Then you want to get rid of "." so you can use the following line temp = str.split("/"); if(temp[temp.length-1].includes('.')) This will help you remove only the last /. If you want to remove each /, you can use temp = str.split("/").splice(1); A: You should first split the string into parts (for example using explode()). Then go through the parts and check if the last one is the slash you want to delete. if (lastPartIsWholeSlash { ... } else { ... } Another way, if you know that you have only three parts is to just check if the last part is the last one: if (str.split("/").length-1 === 0) { ... } else { ... } This is a little bit more compact than the explode() way, because you don't have to do any extra calculations. But I would prefer the first solution. Universal sampling in three-dimensional spectral domain optical coherence tomography: theory and experiment. High-frequency spectral domain optical coherence tomography has been developed based on nonlinear wavelength mixing. A challenge of the technique is efficient and unbiased sampling in the spectral domain. We investigate a technique that achieves sampling using multiple reference depth planes. A model is proposed and we show that the maximum number of reference planes will depend on the relationship between the signal and reference cross-sections. We experimentally demonstrate unbiased sampling in three dimensions.// This file has been autogenerated by `tools 3da54e8ca3`
